AIRBRUSH SPRAY TANNING

Spray tanning is a form of self tanning (or sunless tanning) where a fine mist is sprayed onto your body.

This mist has an ingredient in it called Dihydroxyacetone (DHA) that interacts with your own skin's chemistry to turn it tan, or bronze.

This temporary effect generally lasts from 5-10 days and is completely safe for your skin (although it doesn't provide any protection against the sun's rays).

Pre-Tan Prep Arrive with clean, exfoliated skin. Avoid any lotions, make-up or deodorants

Post-Tan Care Avoid showering or getting wet/sweaty for at least 6-8 hours after your tan. Be sure to keep your entire body moisturized after your tanning session.
